

## Boxx network

Low delay video transmission

**Boxx Network** is the new low delay digital video transmission system from Boxx Microwave Systems.

This revolutionary technology allows video transmission to be viewed on a host of hand-held computer platforms without break-up, noise or ghosting.

Boxx Network is a unique network solution that can cover any terrain and stream live camera output anywhere in the world.

Welcome to the next generation of low delay microwave transmission.

## Revolutionise the way you work

# features

Boxx Networkx provides a low delay digital video link with excellent stability and reliability.

You can view the camera output on a local network or streamed via the internet anywhere in the world.

Boxx Networkx features

- low latency - 3 frames PAL, 4 frames NTSC
- dedicated viewing software for multiple platforms
- up to 11 license exempt channels
- no break-up, noise or ghosting
- dual frequency 2.4Ghz/5Ghz. 802.11a,b,g (N available 2008)
- can be networked to cover any terrain
- secure encrypted transmission
- automatic channel select (seeks and locks onto cleanest frequency)
- dedicated software so you can instantly review footage.

# applications

Boxx Networkx can be used in a variety of environments including feature film, documentary, body-worn covert filming, reality show or live sporting event.

Ideal for

- multi-camera production viewing platform replacing the need for traditional OB trucks
- digital replacement for analogue video assist for film, video and Steadicam
- covers a large terrain for reality TV video village and portable field monitoring environments
- sporting arena and events filming for large screen presentation
- remote monitoring and recording of body-worn surveillance equipment
- emergency services and homeland security.

# software

Boxx Networkx uses a dedicated software package for viewing live multi-camera output streams simultaneously. This software is constantly reviewed and modified for maximum usage and flexibility for the end user, and can be tailored to meet any production requirement.

- Switch instantly between 9 cameras
- rewind, pause, and replay live camera feeds
- display 9 camera feeds on one laptop screen
- move and re-size multiple display windows
- select audio streams
- adjust latency and quality
- stream anywhere in the world.

# platforms

Boxx Networkx can be viewed on a number of hand-held portable platforms and will work on Windows XP™ or Windows Mobile™.

Additional platforms including Sony PSP, Archos 704 and MAC will be released in 2008.

Samsung Q2

Archos 704
