For Immediate Release

### ***DATAVIDEO'S SE-800 IN CONCERT***

**Singapore, Indoor Stadium** - Datavideo's SE-800 Digital Video Switcher was being used during Eric Moo World Tour 2005, which was held in the Singapore Indoor Stadium. Unusual Design & Communications, who was the organizer of the concert, selected the Digital Video Switcher to project the camera outputs, the animations and the lyrics on the main screen.

One of the many features that SE-800 has, is the 4 groups of video inputs. During the concert two of those inputs were used for the cameras, each from a different angle, one was used for the animations, and the last one for inserting lyrics and the credits. During the concert they were able to switch live between the two cameras and the computer graphics. In addition, they were capable to mix and project numerous animations and lyrics onto the main screen live throughout Eric Moo's performance.

Besides the SE-800, Unusual used Datavideo's TLM-70D high resolution TFT LCD monitor to supervise the output on the main screen. Each separate input on the SE-800 was monitored via Datavideo's TLM-404 TFT LCD monitor bank. Moreover, Datavideo's DV Bank hard disk DV recorder was being utilized as continuously back up recording of the concert for more than 3 hours.
